AWS CERTIFIED AI PRACTITIONER · AIF-C01

# Domain3　基礎模型的應用　精選練習 10 題

## 第 1 題

A company is using a pre-trained large language model （LLM） to build a chatbot for product recommendations. The company needs the LLM outputs to be short and written in a specific language. Which solution will align the LLM response quality with the company's expectations?

A. Adjust the prompt.
B. Choose an LLM of a different size.
C. Increase the temperature.
D. Increase the Top K value.

## 第 2 題

An AI practitioner wants to use a foundation model （FM） to design a search application. The search application must handle queries that have text and images. Which type of FM should the AI practitioner use to power the search application?

A. Multi-modal embedding model
B. Text embedding model
C. Multi-modal generation model
D. Image generation model

## 第 3 題

Which feature of Amazon OpenSearch Service gives companies the ability to build vector database applications?

A. Integration with Amazon S3 for object storage
B. Support for geospatial indexing and queries
C. Scalable index management and nearest neighbor search capability
D. Ability to perform real-time analysis on streaming data

## 第 4 題

A company wants to build a generative Al application by using Amazon Bedrock and needs to choose a foundation model （FM）。 The company wants to know how much information can fit into one prompt Which consideration will inform the company's decision?

A. Temperature
B. Context window
C. Batch size
D. Model size

## 第 5 題

A company is implementing the Amazon Titan foundation model （FM） by using Amazon Bedrock. The company needs to supplement the model by using relevant data from the company's private data sources. Which solution will meet this requirement?

A. Use a different FM.
B. Choose a lower temperature value.
C. Create an Amazon Bedrock knowledge base.

D. Enable model invocation logging.

## 第 6 題

A company wants to use large language models （LLMs） with Amazon Bedrock to develop a chat interface for the company's product manuals. The manuals are stored as PDF files. Which solution meets these requirements MOST cost-effectively?

A. Use prompt engineering to add one PDF file as context to the user prompt when the prompt is submitted to Amazon Bedrock.
B. Use prompt engineering to add all the PDF files as context to the user prompt when the prompt is submitted to Amazon Bedrock.
C. Use all the PDF documents to fine-tune a model with Amazon Bedrock. Use the fine-tuned model to process user prompts.
D. Upload PDF documents to an Amazon Bedrock knowledge base. Use the knowledge base to provide context when users submit prompts to Amazon Bedrock.

## 第 7 題

Which option is a benefit of ongoing pre-training when fine-tuning a foundation model （FM）?

A. Helps decrease the model's complexity
B. Improves model performance over time
C. Decreases the training time requirement
D. Optimizes model inference time

## 第 8 題

A company is implementing intelligent agents to provide conversational search experiences for its customers. The company needs a database service that will support storage and queries of embeddings from a generative Al model as vectors in the database. Which AWS service will meet these requirements?

A. Amazon Athena
B. Amazon Aurora PostgreSQL
C. Amazon Redshift
D. Amazon EMR

## 第 9 題

What does an F1 score measure in the context of foundation model (FM) performance?

A. Model precision and recall
B. Model speed in generating responses
C. Financial cost of operating the model
D. Energy efficiency of the model's computations

## 第 10 題

What is the purpose of chunking in Retrieval Augmented Generation （RAG）?

A. To avoid database storage limitations for large text documents by storing parts or chunks of the text
B. To improve efficiency by avoiding the need to convert large text into vector embeddings
C. To improve the contextual relevancy of results retrieved from the vector index
D. To decrease the cost of storage by storing parts or chunks of the text
