AWS CERTIFIED AI PRACTITIONER · AIF-C01

# Domain4　負責任 AI 準則　精選練習 10 題

## 第 1 題

A company makes forecasts each quarter to decide how to optimize operations to meet expected demand. The company uses ML models to make these forecasts. An Al practitioner is writing a report about the trained ML models to provide transparency and explainability to company stakeholders.What should the Al practitioner include in the report to meet the transparency and explainability requirements?

A. Code for model training
B. Partial dependence plots （PDPs）
C. Sample data for training
D. Model convergence tables

## 第 2 題

An AI practitioner is building a model to generate images of humans in various professions. The AI practitioner discovered that the input data is biased and that specific attributes affect the image generation and create bias in the model. Which technique will solve the problem?

A. Data augmentation for imbalanced classes
B. Model monitoring for class distributior
C. Retrieval Augmented Generation （RAG）
D. Watermark detection for images

## 第 3 題

A medical company is customizing a foundation model （FM） for diagnostic purposes. The company needs the model to be transparent and explainable to meet regulatory requirements. Which solution will meet these requirements?

A. Configure the security and compliance by using Amazon Inspector.
B. Generate simple metrics, reports, and examples by using Amazon SageMaker Clarify.
C. Encrypt and secure training data by using Amazon Macie.
D. Gather more data. Use Amazon Rekognition to add custom labels to the data.

## 第 4 題

Which functionality does Amazon SageMaker Clarify provide?

A. Integrates a Retrieval Augmented Generation （RAG） workflow
B. Monitors the quality of ML models in production
C. Documents critical details about ML models
D. Identifies potential bias during data preparation

## 第 5 題

A social media company wants to use a large language model （LLM） for content moderation. The company wants to evaluate the LLM outputs for bias and potential discrimination against specific groups or individuals. Which data source should the company use to evaluate the LLM outputs with the LEAST administrative effort?

A. User-generated content
B. Moderation logs

C. Content moderation guidelines
D. Benchmark datasets

## 第 6 題

A student at a university is copying content from generative Al to write essays.Which challenge of responsible generative Al does this scenario represent?

A. Toxicity
B. Hallucinations
C. Plagiarism
D. Privacy

## 第 7 題

Which technique can a company use to lower bias and toxicity in generative AI applications during the post-processing ML lifecycle?

A. Human-in-the-loop
B. Data augmentation
C. Feature engineering
D. Adversarial training

## 第 8 題

A company is building a solution to predict risk by using generative Al. The company needs to understand and trust the automated solution before replacing previous manual processes. Which solution meets these requirements?

A. Model monitoring
B. Model training
C. Model explainability
D. Model inference evaluation

## 第 9 題

A company is using a generative AI model to develop a digital assistant. The model's responses occasionally include undesirable and potentially harmful content. Select the correct Amazon Bedrock filter policy from the following list for each mitigation action. Each filter policy should be selected one time. (Select FOUR.)

**選項清單：**

- Content filters
- Contextual grounding check
- Denied topics
- Word filters

**請為下列各項配對正確選項：**

1. Block input prompts or model responses that contain harmful content such as hate, insults, violence, or misconduct → （ ）
2. Avoid subjects related to illegal investment advice or legal advice → （ ）
3. Detect and block specific offensive terms → （ ）
4. Detect and filter out information in the model's responses that is not grounded in the provided source information → （ ）

## 第 10 題

Which component of Amazon Bedrock Studio can help secure the content that Al systems generate?

A. Access controls
B. Function calling
C. Guardrails
D. Knowledge bases
